Solutions in Pumping Technology

# Verder Service Centre

Experience has shown that businesses are focussing most attention on their core disciplines and turning to specialist supply and service industries for site pump and control repairs and maintenance programmes. Verder, as a provider of total pump solutions, is ideally placed to offer a complete service package to its valued customers.

Drawing on many years of experience, our highly skilled and motivated staff can tailor the service to meet the individual needs of the customer. All staff at our Leeds based pump service and repair centre work according to VERDER ISOQAR ISO 9001:2000 accreditation standards giving you complete confidence in the service we provide.

The service package has been designed to provide the maximum cost benefits to you and Verder is certain that the service provided will prove highly effective in meeting your needs. Verder aims to deliver solutions that are practical, achievable and cost effective.

This brochure details the range of services Verder offers, should you require any other related service, advice or further detail, please do not hesitate to contact the service team.

## Pump Survey:

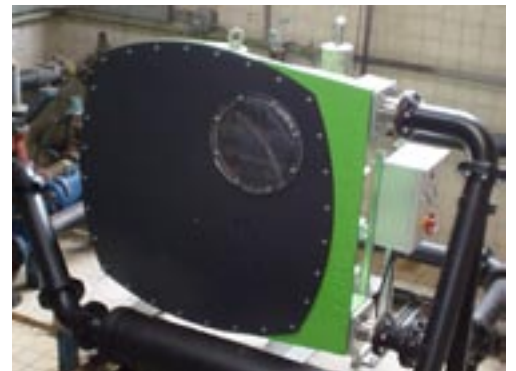

One of the services offered by Verder is a pump survey which would include:

- The identification of the pumps installed on site
- A stock and stores review to identify critical spares
- An assessment of stock levels to be held on-site or in a bonded stock area
- The management of stock with a view to reducing client owned inventory without compromising critical plant cover.

## Installation

Verder technical staff can assist in installation of your pump systems, this service includes:

- Mechanical and electrical installation of pumps, pipework and control equipment
- Electrical wiring to include certification where required
- Drawings can also be provided, (drawings will be subject to an additional charge)

## Commissioning:

Verder can deliver a programme of onsite commissioning of your pumping system and control philosophy ensuring the correct application and that the specified duty of the unit installed satisfies all of its requirements.

## Package Built Sets:

Verder has engineers who design and build various types of package sets using its technical expertise to apply and select equipment to suit the needs of the customer.

The units are built and fully tested before site installation to ensure that downtime is minimised. Witness testing can be arranged if advance notice is given.

## Test Bay:

In our Leeds Service Centre we have the facility for calibrated testing of new, repaired and specialised pump package sets, including hydraulic and vibration checks.

## Repairs and Refurbishment

Verder offers a comprehensive repair and refurbishment service for your pumping equipment, including motor panels and drives.

Verder also manufactures a range of different pumps and can therefore provide cost-effective replacements of old or obsolete equipment. The sales team is fully trained and can offer advice and solutions for the replacement of this equipment.

## Preventative Maintenance Programmes

Verder can recommend a maintenance scheme to suit your individual needs, taking in to account various factors and would:

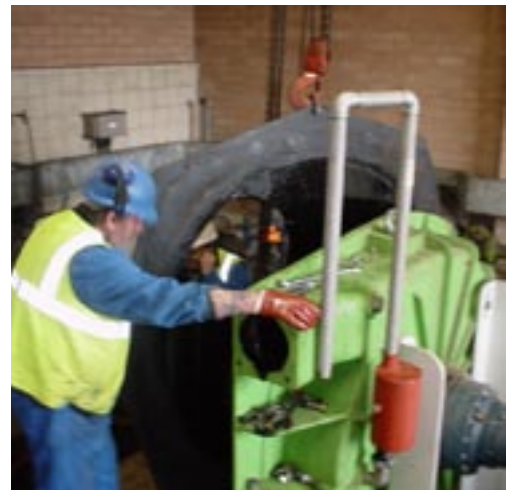

- Identify critical plant and minimise down time or lost production
- Extend mean time between overhauls
- Enable budget controls and improve profitability by being aware of the condition of current pumping equipment and controls
- Identify and deal with any potential failures before they occur thereby reducing down time

## Contract Maintenance

Verder provides regular inspections on most installations and can tailor the service to meet your needs giving your plant a longer working life. With a longer working life you can almost be guaranteed a return on your investment with increased profits.

## Engineering Technical Support:

Verder's technical sales team has in-depth knowledge and expertise of pumping systems. They have a wealth of experience in a variety of applications and industries which ensures quality service and gives customers peace of mind.

# Summary of Service

Verder is an international company able to call upon the resources of other members of the group, to offer industry a full range of pumping solutions.
